

Data Pipelines & NL Dashboards

Connects all your data and lets anyone on your team ask it questions in plain English.

4 sec

to answer questions that used to take 4 hours

01 — WHAT THIS ACTUALLY IS

Most businesses are sitting on more data than they know what to do with — sales records in one spreadsheet, customer data in the CRM, inventory in another tool, and nobody has a clear picture of what is actually happening.

We connect all your data sources, clean them up, and build you a dashboard where anyone on your team can ask a question in plain English and get an answer. Type what were our top 5 products last month and see a chart. Type how many new customers did we get this quarter and see a number.

No Excel formulas. No SQL. No waiting for a report from someone else.

The dashboard updates automatically every day. You walk in every morning and your business numbers are already there, current, and accurate.

02 — HOW WE BUILD IT, STEP BY STEP

1

Data audit

What we do: We map every data source you have — spreadsheets, CRM exports, databases — and assess what is usable, what is messy, and what is missing.

Your role: You give us access to your data sources and tell us the decisions you most wish you had better data for.

Duration: *2–3 days*

2

Pipeline build

What we do: We build the data pipeline — a system that pulls from all your sources on a schedule, cleans the data, and loads it into a central database every day automatically.

Your role: Nothing during this phase. We work independently.

Duration: *4–5 days*

3

Dashboard build

What we do: We build the dashboard with a natural language input bar, plus your 5 most-used pre-built reports so the answers to your most common questions are one click away.

Your role: You tell us the 5 questions you most want answered about your business every week.

Duration: *5–6 days*

4

Accuracy check

What we do: We run every pre-built report against your actual data and test 30+ natural language questions, fixing any that return the wrong answer.

Your role: You review 3–5 reports and confirm the numbers match what you expect.

Duration: *2 days*

5	Training and handover What we do: We run a 45-minute training session showing your team how to use the dashboard, ask questions, and export reports. Your role: You attend the training with whoever will use the dashboard day-to-day. Duration: <i>Half a day</i>
---	---

03 — WHAT YOU NEED TO GIVE US

- Access to your data sources (Google Sheets, CRM, database exports, etc.)
- The 5 questions you most want your data to answer every week
- One person to review numbers and confirm accuracy

04 — WHAT YOU GET AT THE END

- A central clean database updated automatically every day
- A natural language dashboard — ask questions, get charts
- 5 pre-built reports for your most important metrics
- A training session for your team
- A data dictionary explaining what every metric means
- 14-day post-launch support included

05 — HOW LONG DOES THIS TAKE

Week 1	Week 2	Week 3
· Data audit · Pipeline build	· Dashboard build · NL query setup	· Accuracy testing · Training session · Go live

06 — TOOLS WE USE, IN PLAIN TERMS

Every tool below is explained in plain English — no technical knowledge required to understand this.

Airflow / n8n	Moves your data from all sources into one place automatically, on a daily schedule.
PostgreSQL	The secure database that stores all your clean, organized business data.
OpenAI	Understands the questions you type and translates them into database queries behind the scenes.

Streamlit / Metabase	The dashboard your team sees and interacts with every day.
Python	Cleans and transforms your raw data before it enters the database.

07 — INVESTMENT

Custom pricing	Ongoing support
Tailored to your business	Get in touch for a quote

- Daily pipeline monitoring and error handling
- New data source additions
- Dashboard updates and monthly accuracy checks

No lock-in. You own 100% of everything we build.
