

End-to-End Workflow Automation

Replaces the manual, repetitive admin work your team does every single day.

15+

hours saved per employee per week

01 — WHAT THIS ACTUALLY IS

Think about everything your team does that follows a pattern — an invoice comes in, someone reads it, copies the numbers into a spreadsheet, and emails the finance team. A new employee joins, someone sends them five emails, creates their accounts, and adds them to three different tools.

None of that needs a human. It just needs software that knows the rules.

We map out exactly how your team works today — every manual step in your most time-consuming processes — and we build software that does those steps automatically. The process runs in the background, 24 hours a day, without anyone touching it.

Your team stops being administrators. They start doing the work only humans can do.

02 — HOW WE BUILD IT, STEP BY STEP

1

Process audit

What we do: We run a 90-minute session where you walk us through your most repetitive daily tasks. We map every step, every tool involved, and every decision point.

Your role: You walk us through your top 3 most repetitive processes. No preparation needed.

Duration: *1–3 days*

2

Automation design

What we do: We turn your process map into an automation blueprint — a clear diagram showing exactly what the software will do at each step, what triggers it, and what it produces.

Your role: You review the blueprint and confirm it matches how your business actually works.

Duration: *2–3 days*

3

Build

What we do: We build the automation pipeline — connecting your existing tools and adding an AI decision layer for anything requiring judgment.

Your role: You give us access to the tools we need to connect.

Duration: *4–6 days*

4

Testing

What we do: We run 30+ real scenarios through the automation — normal cases, edge cases, error cases — and fix every issue before you see it live.

Your role: You review 5 test outputs and confirm they look right.

Duration: *2 days*

5	Handover and training What we do: We run a 30-minute session with your team showing them how to monitor the automation, pause it if needed, and read the logs. Your role: You attend the handover session. We provide a written operations guide. Duration: <i>Half a day</i>
---	---

03 — WHAT YOU NEED TO GIVE US

- 60–90 minutes for the audit session
- Access to the tools you already use (Gmail, CRM, Slack, etc.)
- A list of your top 3 most repetitive internal tasks
- One point-of-contact person from your team

04 — WHAT YOU GET AT THE END

- A fully automated version of your top 3 manual processes
- A visual process map showing exactly what the software does
- A simple monitoring dashboard
- A written operations guide for your team
- 14-day post-launch support included

05 — HOW LONG DOES THIS TAKE

Week 1	Week 2	Week 3
· Process audit · Automation design · Blueprint approval	· Build · Internal testing	· Client testing · Handover session · Go live

06 — TOOLS WE USE, IN PLAIN TERMS

Every tool below is explained in plain English — no technical knowledge required to understand this.

n8n	The automation engine — connects your tools and runs the workflow logic automatically.
Python	Handles any custom logic, calculations, or data transformations the workflow needs.
LangChain agents	The AI layer that makes judgment calls inside the workflow when rules alone are not enough.

FastAPI	The backend that keeps everything running reliably in the background.
Zapier / Make	For connecting simpler tools that do not need custom code — quick and reliable.

07 — INVESTMENT

Custom pricing	Ongoing support
Tailored to your business	Get in touch for a quote

- Monitoring and error handling
- Monthly process improvements
- New automation additions as your business grows

No lock-in. You own 100% of everything we build.

Ready to see this running in your business?
